

Heat Exchanger Integrity Inspection

Bactoforce offers a unique package of 3 services to combined to a **full Heat Exchanger Integrity Inspection** - all performed in the same sequence, **without opening** the heat exchanger and with minimum loss of production time.

Leakage Test

Reduce risk of cross contamination (internal / external).

Localization & Single Plate Validation:

Defective plates/gaskets are identified on site and can be validated and replaced immediately.

Energy Side Cleaning

On-site cleaning using mobile pump-set to improve energy efficiency.

Organic Residue Test (TOC)

Inspect for residues on the product side of the heat exchanger to ensure effective cleaning.

Tank Validation and Riboflavintest

- Full access to inspection reports
- Equipment overview
- Inspection planning
